PROFESSIONAL EXPERIENCE

The Software Guild
Full Stack Web Developer (.NET/C#) 2019 - 2020

Car Dealership
Created a Mock Car Dealership Application utilizing ASP.NET MVC and a SQL Server database. C#/.NET combined with ADO.NET to access data. HTML, JavaScript, and Bootstrap were used for the front-end. A user can register to be an Administrator or Salesperson. Admin can modify cars and car dealership details. Salespeople create purchase logs and make sales to customers. 90+ unit tests make for easy refactoring.

Flooring Mastery
Created an application allowing a user to create, retrieve, update, and delete customer orders. Order costs are calculated using the labor cost, materials, and tax rates for the customer's state. Tax rates and materials are stored in a text file, while orders are saved in separate text files.

DVD Library
ASP.NET MVC website with API functionality. Allows a user to create, edit, delete and search for DVDs in a database. Use of View Models, and model binding to relay information between Views in the Controller. ADO.NET and SQL were implemented for the creation of Stored Procedures that hold the data commands.
